Designing Safe Road Systems

A Human Factors Perspective

Jan Theeuwes, Vrije Universiteit Amsterdam, Richard van der Horst, Netherlands Organisation of Applied Scientific Research (TNO) and Maria Kuiken, DHV, The Netherlands

Human Factors in Road and Rail Transport

Designing Safe Road Systems provides the background for those who want to know more about the effects of road design on driving behaviour. It uses a systems approach to allow a better understanding of why and in what circumstances drivers may commit errors. This understanding will ultimately lead to road systems that prevent (fatal) errors from occurring.

The book contains an overview of the current models and theories about human performance and human behaviour in traffic that are relevant for all those involved in designing safe road systems. The central theme of this book is how design principles can reduce the probability of an error while driving. The authors demonstrate how knowledge of human factors helps a road authority to better understand how road users behave. They argue that in many cases the design of the environment can be further adjusted to human capabilities, and that safety should be considered a system property to be built into the road system.

Contents: Foreword; Introduction; Self-explaining roads and traffic system; Resilience to failure and breakdown; The performance of road users: hierarchical task levels; Workload management; Information carriers meet basic ergonomic principles; Individual information elements are consistent and uniform within their context; Risk averse side effects of measures; Motivational aspects; Variation in performance; Communicating with the road user; Summary and conclusions; Index.
